Learning Points

Saying How Far a Place Is

When you want to know how far a place is, you can use the question: *How far is ... ?/How far is ... from here?*

You can reply with a specific distance if you know the answer, like: *It's 50 yards away.*

In the USA, you use the Imperial system, not the metric system.

If a place is nearby, you use yards to say how far it is.

If a place is far, you use miles to say how far it is.

Imperial System	Metric System
1 mile	1.6 kilometers
1 yard	90 centimeters
1 foot	30 centimeters
1 inch	2.5 centimeters

Examples:

- **Sally:** *How far away is the temple?*
- **Guide:** *It's about 4 miles away from the center of Beijing.*
